

### Three by three CI

► The *Printer 20* by heri is sporting a new look. The special feature of the practical stamp is its patented, large index window, which in addition to its customised stamp function now also enables the easy and flexible reproduction of personalised information or individual logos on the index card.

It is possible to design individual customer texts, image motifs or logos quickly and simply using the supplied software, which is particularly advantageous for small order quantities and quick deliveries.

The *Printer 20* offers a printing space of 38 x 14 mm and up to four lines for personalised stamp messages and when given a CI-compatible design, offers the promoting company invaluable services and is furthermore always directly in the customer's view. The stamps can be ordered online in a fast and simple process at [www.stempelservice.com](http://www.stempelservice.com).

Takes off:  
The Sky ballpoint.

### Heavenly

► klio eterna is presenting its new writing instrument series, which seems to float down to the earth from heavenly heights just in time for the spring. The writing instrument *Sky* emanates spacious elegance and distinguishes itself from the masses above all due to its unmistakable metal barrel.

The model is equipped with an ice-fill refill with a tungsten ball as a standard thus meeting all possible demands as far as writing comfort is concerned.

Varying versions are available: Whereas *Sky* comes with a full-colour barrel and satinised attributes, *Sky Ice* stays really cool with a frosted barrel and satinised metal parts. Not to mention the *Sky Transparent* with its transparent barrel and polished chrome-plated attributes.

### Life sentence for bottle openers

► It is a good idea to have things you always need ready at hand: Emergency tools and a bottle opener to pop that well-earned beer or a trolley chip for a shopping spree.

Hardened steel souvenirs or give-aways of top-class workmanship featuring additional functions, whose quality has been tried and tested in Sweden over the past ten years, are now taking to the European market. The hard, patented tools are exclusively Swedish-made products – from the design through to the manufacturing process: The raw material is extracted from the mines in Kiruna and refined into metal powder in Höganäs, finally they are processed into their ultimate form in Huskvarna.

Regardless of the model, Sinterteknik places high value on the quality, function and design of its products, which are intended to provide a life-long service. However, on special request the pendants and chips can be produced as recyclable items.

Why not enjoy a  
lemonade or a beer  
after that strenuous  
shopping trip.

Not just something for the  
tough guys: A bottle opener  
with tools.
